

## ABSTRACT

Conformational antigens and antibodies recognizing said antigens, a process for the efficient generation of monoclonal antibodies to native or conformational antigens expressed or carried by eukaryotic cells. A process for the selection of conformational antigens, use of 5 monoclonal antibodies for therapeutical, diagnostic or vaccine applications.

The process for preparing monoclonal antibodies, comprises:  
rendering an animal tolerant to an eukaryotic cell in a first state;  
detecting said tolerant animal;  
immunizing said tolerant animal, by injection of the eukaryotic cell in a second state  
10 carrying a neo-antigen or a non-self antigen;  
fusing B cells of said immunized mice with a myeloma cell line; and  
selecting the hybridoma expressing antibodies against said neo-antigen or non-self antigen.
